

For example, I need to count the quantity of my business card in plastic bowl.

1. Power on the scale

2. Put on small quantity, here I put 6 cards on the plate. You can put on any quantity you like, just note you need to type in the correct quantity in next step.

3. Press the quantity you had put on plate (here I need to press **[6]**) and press **[SAMPLE]** key
Scale will auto-calculate the unit weight of each card.

4. Now, we can put the rest cards on plate, the scale will show you the quantity.

5. You can save the unit weight if you need to weigh same goods in future.
Press **[SAVE]**

6. Press **[M1]**, **[M2]**, **[M3]** or **[M4]**

Next time if you need to count the same goods, you just need to power on the scale and press memory key **[M1]**, **[M2]**, **[M3]** or **[M4]**

Then you put on the goods you need to count, the scale will show you the quantity.
